

MTS INTELLIGENT SURVEILLANCE SOLUTIONS

Deal PD – Model Police Station

A fully integrated security architecture was developed and implemented at the Deal Municipal Complex in Deal, New Jersey. Complying with Federal, State, and County policies, a single-system security architecture provides video surveillance, alarming/alerting, facility access control, and integrated audio monitoring/recording for the police station, municipal court, and Borough administrative facility.

MTS Intelligent Surveillance Solutions designed and implemented the integrated security solution during a facility renovation project, basing the system on Intelligent Security System's SecurOS application. With a software-based architecture, MTS was able to integrate video, audio, and access control within a single application on a single server.

The entire architecture is events-based, i.e., all video cameras, card readers, and audio microphones are system sensors with defined events. This enables the police to perform other policing functions while the system monitors events and provides an event-based log of all activities. Within pre-defined policies, key events trigger alerts and alarms, providing notification for dispatch officers.

The system conforms to New Jersey Department of Corrections (NJDOC), New Jersey Attorney General (NJAG), Monmouth County Prosecutors Office (MCPO), and the Administrative Office of Courts (AOC) Policy Requirements

CASE STUDY

Technology Included

Digital Video Surveillance
Facility Access Control
Integrated Audio
Integrated Panic Alarm
Two-way audio

key features

- All Vandal-proof Cameras
- Surveillance Locations
 - Processing Room
 - Holding Cells
 - Secure Corridor
 - Interview Room (CID)
 - Evidence Vault
 - Armory
 - Facility Perimeter
 - Entrance Ways
 - Court Room
 - Records
 - Court Administration
- Integrated Video/Audio recording on select locations
- Integrated Mug Shot camera
- Access Control Proximity Readers
- Two-way audio to holding cells
- Integrated Panic Alarm
- Event-Based logging
- Multiple Camera Environment
- Access control integrated with Fire Alarm system
